

Greening the conference

Author: Gabriele Brennhaugen<post@ua21.no>

(12.11.2007) As an environmental conference, Tunza 2008 will attempt to reduce its impact on the environment.

Young Agenda 21 has therefore started working towards an "Eco-lighthouse" certification.

"Eco-lighthouse" is a national Norwegian branding programme for companies and organizations that fulfill strict standards for sustainable practise. Transportation, waste management, use of energy, and purchase of food and goods are among the fields which are covered by the programme.

In addition the local conference organizer will try to allocate funds to purchase "climate tickets" for the delegates who fly in to Stavanger. The "My Climate" programme works with a reduction of CO2 emissions in selected developing countries, and the climate tickets ensure the funding of such projects. Please find more information at www.myclimate.com
